SUMMARY

Computer Engineering graduate (Thammasat University, 2026) who builds backend services in Go with Hexagonal Architecture, and the AI features that run on top of them. Shipped AI security alerts, AI translation for a live four-language corporate website, and a product recommendation chatbot. Clear communicator who breaks large features into small, trackable tasks.

EXPERIENCE

Backend Developer Intern · Better Way Group

Bangkok, Thailand

- **CyberSecAI, AI security alerts:** Connected AI to a network security system so the security team sees threats without digging through logs. Built a dashboard that groups detections by 5 severity levels, source country and hour, ranks the top risks, and tracks bandwidth per protocol. Added AI insights and Spock, a voice assistant that surfaces new alerts and the top 10 risks.
- **AI website translation (betterway.co.th):** Translated the corporate website into Thai, English, Japanese and Chinese with Gemini 2.5 Flash. The Go backend stores translations in MySQL, so pages load without calling the AI on every visit.
- **Product recommendation chatbot:** Built Nong Friday, a shopping chatbot that turns a customer's plain-language need (such as "dry lips") into product cards with price, Add to cart and Details buttons.
- **B2C back-office:** Built the admin website in Go that the team uses to manage the data and operations behind a customer-facing app.

PROJECTS

Warframe Archive · Personal project warframe-archive.vercel.app

- Thai-language Warframe fan site with **50–100 visitors a week**, built with React and Vite and hosted on Vercel.
- Features an interactive story timeline, a star-chart drop map with search, open-world maps with fishing data, a Prime Resurgence and Baro Ki'Teer tracker, and guides written in Thai.

Slave card game

- Digital version of the Thai card game Slave for 4–8 players, with special item cards that change how a round plays out.

SKILLS

Languages	**Go (main)**, Python, TypeScript, JavaScript, Java
Backend	Gin, Fiber, GORM, Node.js, Express, Django, Flask; REST, WebSocket, JWT, OAuth2
Architecture	Hexagonal (Ports & Adapters), Clean Architecture, Domain-Driven Design, Microservices
Data	MySQL, MongoDB, Redis, SQLite, Firebase/Firestore, Prisma, SQLAlchemy, Django ORM
AI	OpenAI, Claude and Gemini APIs, LangChain/LangGraph, Hugging Face Transformers, RAG, tool calling, Pinecone, Qdrant
Frontend	React, Next.js, Vue, Nuxt, Tailwind CSS, Vite
Cloud & DevOps	Docker, AWS, Google Cloud, Vercel, Render, GitHub Actions, Nginx, Linux
Testing & tools	Go testing/testify, Postman, Swagger/OpenAPI, Git/GitHub, Claude Code

EDUCATION

B.Eng. Computer Engineering · Thammasat University

Graduated 2026 · **GPA 3.50 / 4.00**
